

IMPROVE YOUR FOOTBALL TEAM'S PERFORMANCE WITH THE ...

variable intensity

Tackle Simulator

Improve your defense and win more matches!

In a realistic and safe way, the Tackle Simulator allows players to practice proper seed and angle for tackles. You can also increase the difficulty level of the exercise by inclining the overhead beam. This adjustment only takes a few seconds and does not require any tool. Just turn the crank handle to lower one end of the beam to desired height and thus make the dummy harder to stop and to drive back. Players of different levels can therefore train efficiently by adjusting the machine according to their capacity.

This equipment is built with a sturdy steel structure and proven industrial quality components to provide years of maintenance-free service. Hanging dummies of various weights are available in option.

Apparatus approximate dimensions:
Length: 24' Width: 8' Height: 9'
